switch SAFE®

ALWAYS ON DDoS ATTACK MITIGATION PLATFORM

As more businesses and governments digitize essential services, the need to keep these services up and running becomes even more critical. During a Distributed Denial-of-Service (DDoS) attack, a cybercriminal floods a server with internet traffic to prevent users from accessing connected online services and sites.

Switch SAFE® is designed to help our clients as they mitigate DDoS attacks. We work with each client to understand attack profiles and configure networks to respond to the evolving threat landscape.

Statistics highlight the prevalence of DDoS attacks, which can cause reputation damage and revenue loss without mitigation protection.

10M	**465%**	**$22K**	**$2M**
